NORTHWEST VEGETATION MANAGEMENT

COMPANY OVERVIEW

Northwest vegetation management is a dynamic new diverse service with well-equipped and maintained fleet of machinery.

We are looking to develop strong and continuous working relationships within the mining and government sectors along with developers, farmers and landowners.

With 35+ years of experience in the mining / construction and agriculture industry our services include, but are not limited to:

- Targeted selective clearing
- Forestry mulching
- Fire mitigation reducing high fuel loads
- Invasive species control
- Regrowth control
- Right of way clearing
- Fence line preparation and maintenance
- Forced vegetation control orders

The business is built around a comprehensive safety management system to ensure risk management and compliance is continuously monitored giving peace of mind.

The benefits of Northwest vegetation management will support regeneration of native vegetation with an environmentally friendly process which will increase soil fertility along with the following.

- Minimal environmental impact
- Maximise land value
- Sustainable
- Cost effective
- Efficient
- Fast removal of heavy brush
- Reduced needs herbicides
- Increase usable space
- Versatile in steep ground
- Minimise erosion with a blanket of mulch

Our unique blend of specialised equipment, extensive local expertise and a client-centric approach sets us apart in the industry. We offer a complete solution that enhances safety, improves aesthetics, and protects the environment.

Contact us for a consultation and discover the difference our capabilities can make for your next project.
